Application/Control Number: 10/779,572 Page 2

Art Unit: 2154

Art Rejections:

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 3. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nishikawa et al, U.S. pat. No. 6,658,457 in view of Daines et al, U.S. pat. No. 6,192,422.

Per claim 1, <u>Nishikawa</u> discloses a method for controlling Ethernet data flows on a SDH network comprising:

- a) providing a buffer at a receiving node for buffering data transmitted from a source node (see_col 5, lines 7-13),
- b) monitoring the buffer level to detect and control data flow (see col 9, lines 31-35).

Application/Control Number: 10/779,572

Art Unit: 2154

Nishikawa does not explicitly teach using high and low buffer threshold levels to monitor the data flow. The use of high/low buffer levels is well known in the art as disclosed by Daines (see Daines' col 4, lines 4-16).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to utilize high/low buffer levels in <u>Nishikawa</u> because it would have enabled higher throughput Ethernet data flow.

Per claim 2, it would have been obvious to one skilled in the art that the buffer could have been implemented with any comparable types of memory including SDRAM.

Per claims 3-4, <u>Nishikawa</u> teaches allocating bandwidth including buffers for different type of applications (<u>see Nishikawa's col 7, lines 14-26</u>). It would have been further obvious to one skilled in the art to recognize that the size of the buffer would have been selected based upon many network factors including the transmission distances and delays.

4. Claims 5-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over <u>Nishikawa</u> and <u>Daines</u> and further in view of <u>Lin</u> et al, U.S. pat. No. 6,754,179.

Neither <u>Nishikawa</u> nor <u>Daines</u> teach using pause frames having time parameters to control data flow. Such use of timed

pause frames in Ethernet data flow is also well known in the art as disclosed by <u>Lin</u> (see <u>Lin's col</u> 2, lines 22-39).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Nishikawa and Daines with Lin's teachings because it would have further improved system throughput (see Lin's col 2, lines 56-64).

Conclusion:

- 5. The references cited by the examiner on PTO-892 but not relied upon are considered pertinent to applicant's disclosure.
- 6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Viet Vu whose telephone number is 703-305-9597. The examiner can normally be reached on Monday through Thursday from 8:00am to 4:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Follansbee, can be reached on (703) 305-8498.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is 703-305-9600. The Group fax number is 703-872-9306.
